Routes of Ent		IILALIIIII	ALAND	3 DATANDENTII ICA	ATION					
Routes of Ent	•	. Harmful by a	ll routes	of entry						
<u>Sulfuric Acid:</u>		Harmful by all routes of entry. Hazardous exposure can occur only when product is heated, oxidized or otherwise processed or damaged to								
	<u>Lead Compounds:</u>	Hazardous exposure can occur only when product is heated, oxidized or otherwise processed or damaged to create dust, vapor or fumes.								
Inhalation:		,								
illinaiation.	Sulfuric Acid:	Acidic vapor	s are col	orless and are generate	ed only when o	harging	or when electrolyte is h	not Breathin	a of	
	<u>Suljune Acia.</u>	Acidic vapors are colorless and are generated only when charging or when electrolyte is hot. Breathing of sulfuric acid vapors or mists may cause severe respiratory irritation and are caustic to upper respiratory tissues.								
	Lead Compounds:	: Inhalation of lead dust or fumes may cause irritation of the upper respiratory track and lungs.								
Eye Contact:		· <u>I</u>		,			· · · · · ·	-		
_yo oomaot.	Sulfuric Acid:	Savara irritat	ion hurr	ns, cornea damage and	hlindness car	all occi	ır			
Lead Compounds: May cause eye irrita					PIII IC99 CGI	i aii UUUL				
Ckin Cantact		iviay cause e	ye iiiidl	OH						
Skin Contact:		Covers	lion !	an and ultire						
	Sulfuric Acid			ns and ulcerations						
_	<u>Lead Compounds:</u>	Not absorbe	d throug	n the skin						
Ingestion:										
	<u> </u>			itation of mouth, throat,						
	<u>Lead Compounds:</u>			ad compounds may cau lead rapidly to systemic				a and severe	•	

SECTION VI:	FIRST	AID MEASURES				
Inhalation:						
Sulfuric Acid:	Remove	e to fresh air immediately,	if breathing is difficult give of	xygen and cons	sult a physician.	
<u>Lead Compounds:</u>	Remove to fresh air immediately, if breathing is difficult give oxygen and consult a physician. Remove for area of exposure, gargle and wash nose and lips with water, consult physician.					
Eye Contact:						
<u>Sulfuric Acid:</u>	Flush in	nmediately with large amo	unts of salinized water for at	minimum 15 n	ninutes; consult physician.	
<u>Lead Compounds:</u>	Flush w	ith salinized water for at n	ninimum 15 minutes; consult	physician.		
Skin Contact:						
Sulfuric Acid:			unts of water for at minimum itation occurs consult physic		Remove contaminated clothing	
<u>Lead Compounds:</u>	Not absorbed through the skin					
Ingestion:						
			uth, throat, esophagus and s			
<u>Lead Compounds:</u>			ds may cause abdominal pai to systemic toxicity and must			
Medical Conditions Generally Aggravated by Exposure:	Overexposure to sulfuric acid mist may cause lung damage and aggravate pulmonary conditions. Contact of sulfuric acid with skin may aggravate diseases such as eczema and contact dermatitis. Lead and is compounds can aggravate some forms of kidney, liver and neurologic diseases.					
SECTION VII:	FIRE A	ND EXPLOSION HAZ	ARD DATA			
Flash Point: N/A	Flamma	able Limits (Hydrogen G	as): LEL = 4.1	%	UEL = 74.2%	
Extinguishing Media:		am; dry chemical or Halor of high voltage potential!	n. If no chemicals are availa	ble, deluge witl	n water from a safe distance.	
Special Fire Fighting Procedures: Unusual Fire and Explosion	If batteries are on charge, shut off power. Fire protective and acid resistant clothing, protective eyewear, face shield and positive pressure self-contained breathing apparatus should be worn by emergency responders. • Highly flammable hydrogen gas is generated during charging and operation of batteries as such					
Hazards:	 hydrogen gas may be present in the immediate area of the battery and battery room. Water applied to electrolyte can generate heat and causes it to splatter. Lead acid batteries and cells have large amounts of stored chemical electrical energy and high short circuit currents available even when off charge. Do not allow metallic materials to simultaneously contact the negative and positive terminals of cells and batteries. Short circuits can result in large explosions, heat and fire. 					
SECTION VIII:	PHYIS	ICAL DATA				
Electrolyte:						
Specific (ravity:	1.24 +/150	Во	iling Point:	235°F (105 °C)	
Vapor D	ensity:	Greater > 1	Vapor Pressure(mm		10	
Evaporation Rate (Butyl Aceta	te = 1):	Less than < 1	Solubility in W	ater:	100%	
Melting		N/A	% Volatile by We		N/A	
			d/Gel with a sharp, penetratir	ng, pungent od	or	
SECTION IX:		LITY AND REACTIVIT				
Stability:	The battery and its contents are stable.					
Conditions to Avoid:	Overheating and or overcharging which can result in acid mist and increased hydrogen generation. Spillage of electrolyte and sources of ignition.					
Incompatibility: (Materials to avoid	<u>. </u>					
<u>Sulfuric Acid:</u>	<u>c Acid:</u> Contact with combustibles and organic materials may cause fire and explosion. Reacts violently w reducing agents, metals, sulfur trioxide gas, strong oxidizers and water. Contact with metals may provide toxic sulfur dioxide fumes and may release flammable hydrogen gas.					
<u>Lead Compounds:</u>		ontact with strong acids, be hydrogen and reducing a		potassium nitra	ate, permanganate, peroxides,	
Hazardous Decomposition Produc	ts:					
Sulfuric Acid:	Sulfur trioxide, carbon monoxide, sulfuric acid mist, sulfur dioxide and hydrogen.					
<u>Lead Compounds:</u>	High temperatures likely to produce toxic metal fumes, vapor or dust; contact with strong acid or base or presence of nascent hydrogen may generate highly toxic arsine gas.					
Hazardous Polymerization:	Will not occur.					

SECTION X:	PREC	AUTIONS FOR SAFE H	HANDELING AND USE				
Spill or Leak Procedures:			the flow of material and contain/absorb				
		•	fully neutralize spilled electrolyte with so				
			Oo not allow neutralized acid to enter sed during the cleanup process. (See Section				
Handling and Storage:	Store b	patteries in cool, dry, well-v	rentilated areas with impervious surface	s and adequate containment in the			
	event o	of spills. Do not install batt	eries in sealed, unventilated areas and	keep away from fire, sparks and			
	heat.						
Section XI:	WORK PRACTICES/ENGINEERING CONTROLS/PERSONAL PROTECTION						
Safe Work Practices:	Handle all batteries with care to avoid spills and or breakage, batteries are fragile. Prior to working on batteries ensure all flame arrestor vent caps are tight and in good condition. Always use non-conductive or insulated tools when working on batteries. Avoid contact with internal components and avoid short circuits. Always wear the proper PPE when working on batteries. (see below)						
Personal Protective Equipment:	•						
Eye Protection:	Chemi	cal goggles or safety glass	es with side shields and full face shield	should be worn.			
Protective Gloves:	Rubbe	r, plastic or neoprene glov	es with elbow-length gauntlets should be	e worn.			
Respirator Protections:	No respiratory protection is required under normal conditions. When concentration of sulfuric acid mists are known or suspected to exceed the PEL, use NIOSH or MSHA-approved respiratory protection.						
Other Protections:	Acid-resistant apron and under sever exposure emergency conditions acid-resistant clothing and boots should be worn.						
Engineering Controls:							
Room Ventilation:			ng normal operations. Batteries shall be				
			entilations is used ventilation should be Note hydrogen gas becomes explosive	, ,			
		ntrations. (See Section VI)	Note flydrogen gas becomes explosive	e at levels greater that 4%			
Emergency Flushing:	In area	as where lead acid batterie	s are operated and stored emergency e	yewash station and showers shall			
	be prov			,			
Emergency Disconnect:	9	Emergency power disconnect switch shall be well labeled and visible at point of entry to battery room/location.					
Additional Recommendations:		tinguisher, neutralizing me d in work area.	dia and emergency communications sig	ns shall be available and clearly			
SECTION XII:		ECOLOGICAL AND DISPOSAL CONSIDERATIONS					
Ecological Information:	Lead a	nd its compounds can pos	e a threat to the environment if not disp	osed of properly.			
Waste Disposal Methods:	These batteries are fully recyclable and contains no cadmium or mercury compounds. Send to secondary lead smelter for proper recycling. Note is illegal to dispose of lead-acid batteries by any means other than recycling. Consult state environmental agencies along with the federal EPA for full details.						
SECTION XIII:	TRAN	SPORTATION CONSID	DERATIONS AND REGULATORY I	NFORMATION			
U.S. DOT:	The transportation of wet and moist charged batteries with the continental United States is regulated by the						
	U.S. DOT through the Code of Federal Regulations, Title 49 (CFR49). These regulations may classify these types of batteries as hazardous materials.						
IATA:	The international transportation of wet and moist charged batteries is regulated by the International Transport Association (IATA). These regulations classify these types of batteries as hazardous ma						
	The ba	tteries must be packaged	according to IATA packing instruction 8	70			
IMDG:	The international transportation of wet and moist charged batteries is regulated by the International Maritime Dangerous Goods code (IMDG). These regulations classify these types of batteries as hazardous materials. The batteries must be packaged according to IMDG code 4.1 pages 801.						
RCRA:	Spend lead-acid batteries are not regulated as hazardous waste by the EPA when recycled, however state and international regulation may vary.						
Proper Shipping information is as	follows):					
		s: Batteries, wet, non-spillab	le, electric storage				
	Name:		le, electric storage Hazardous Class	8			

SECTION XIII:	TRANSPORTATION CONSIDERATIONS AND REGULATORY INFORMATION (Cont.)
CERCLA (Superfund) and EPCRA:	 A) Sulfuric acid is a listed "Extremely Hazardous Substance" under EPCRA, with a Threshold Planning Quantity (TPQ) of 1,000 lbs. (c) EPCRA Section 302 notification is required if 1,000 lbs. or more of sulfuric acid is present at one site. The quantity of sulfuric acid will vary by battery type. B) EPCRA Section 312 Tier 2 reporting is required for batteries if sulfuric acid is present in quantities of 500 lbs. or more and/or if lead is present in quantities of 10,000 lbs. or more.
	 C) Reportable Quantity (RQ) for spilled 100% sulfuric acid under CERCLA (Superfund) and EPCRA (Energency Planning Community Right to Know Act) is 1,000 lbs. State and local reportable quantities for spilled sulfuric acid may vary. D) Supplier Notification: This product contains toxic chemicals, which may be reportable under EPCRA Section 313 Toxic Chemical Release Inventory (Form R) requirements.
